Rice University’s founders did just that.
That unconventional decision led to Rice being the first college in Houston and one of the world’s leading research institutions.

In 1912, no one could foresee the amazing developments to come, like Buckyballs, nanotechnology and artificial hearts. For the past century, Rice faculty and graduates have been honored with Nobel and Pulitzer prizes, Academy Awards, National Medals of Science and more. But nothing is more important than what will happen in the future. It’s impossible to know what will be discovered during Rice’s next 100 years. Only one thing is certain: When brilliant minds come together, the unconventional wisdom that is Rice makes amazing things happen.
